SUMMARY

Aspiring **Software Engineer** with a strong foundation in **Data Structures and Algorithms (DSA)** and robust software development. Specializing in **Artificial Intelligence (AI)**, **Machine Learning (ML)**, and **Retrieval Augmented Generation (RAG)** architectures to design scalable, intelligent systems. Eager to apply excellent analytical and problem solving skills to tackle complex technical challenges, continuously learn new technologies, and contribute to innovative engineering teams.

EDUCATION

B.Tech, Information Science and Engineering, NMAMIT 2023-2027
CGPA: 8.68/10.00 - Course works: Object Oriented Programming, Database, Operating System , Networking

Pre-University Education - PCMCs, Vidyodaya Pre-University College Aggregate: 2021-2023
96.66/100 - Karnataka State Board

EXPERIENCE

Sasken Technologies Limited June 2025 - July 2025

- Acquired in-depth knowledge of 4G LTE network architecture including Radio Access Network (RAN), base station operations (eNodeB), and core network infrastructure (EPC)
- Analyzed LTE communication protocols and network interfaces (S1, X2) to understand data flow between mobile devices, base stations, and network core
- Studied mobile device attachment procedures and cellular handover mechanisms to understand seamless connectivity maintenance across network coverage areas

PROJECTS

VoxScribe AI (Multi-Agent Content Generator) - Next.js, Tailwind, RAG Pipelines - ([Source Code](#))

- Developed an AI driven content automation tool that streamlines blog creation by transforming YouTube transcripts into publish-ready, SEO optimized articles.
- Integrated RAG capabilities to process external PDF documents, allowing the multi agent pipeline to generate highly personalized, context-aware content.
- Built a scalable and secure user experience utilizing Next.js, Tailwind CSS, and modern authentication protocols for seamless cross device accessibility.

Space Debris Identification System - TensorFlow, Python, OpenCV, Docker - ([Source Code](#))

- Engineered a production grade Computer Vision pipeline utilizing two-phase transfer learning and Batch Normalization locking to classify over 110,000 orbital images.
- Architected a robust preprocessing workflow featuring multi core perceptual hash deduplication and trajectory-based group splitting to completely eliminate data leakage
- Implemented custom space-domain augmentations and dynamic PR curve optimization to resolve a 10:1 class imbalance, achieving > 99% F1-score across multiple vision backbones.

SKILLS

- **AI Systems:** RAG, Vector DBs
- **Backend:** FastAPI, Node.js, REST APIs
- **Frontend:** Reactjs , Nextjs
- **Databases:** MySQL
- **Languages & Tools:** Python, TypeScript, Git, Github, Docker

ADDITIONAL INFORMATION

Hobbies: Swimming, VolleyBall, Gaming

Languages: English, Hindi, Kannada, Tulu
